

RFLN06-10 is a two-stage Low Noise Amplifier that operates from 2 - 6 GHz and can be used in low-power S and C band applications or to drive the high-power amplifier. The amplifier provides 32 dB small signal gain and 19.9 dBm of Output P1dB. The input and output are matched to 50 ohms with on-chip DC blocking capacitors. The device is specifically designed for use in 2 - 6 GHz frequency in point-to-point radios for cellular backhaul Applications, 5G RF transceivers & SATCOM. The technology used to design LNA is 0.1um GaAs pHEMT Process. Results are shown in the datasheet with all parasitic & coupling effects at the desired frequency.

Features:

- RF Frequency: 2-6 GHz
- Noise Figure of 1.2 dB
- Small Signal Gain of 32 dB
- OP1dB of 19.9 dBm
- OIP3 of 27.9 dBm
- Biasing: VDD=4V, VGG=-0.6V, ID= 78mA
- Die Size: 1.15 mm x 1.85 mm

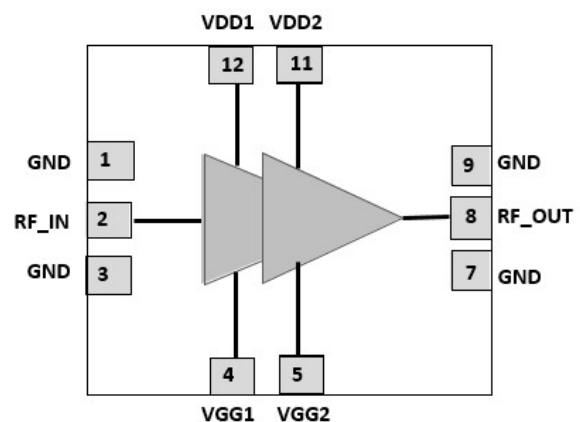

Application:

- 5G mobile system.
- Satellite Communication.
- Point-to-point communication system.
- Terrestrial communication system.
- Radar Application.

Tech Specs:

- Part Number: RFLN06-10
- Provider: RFIC Solutions Inc.
- Foundry node: 0.1um GaAs pHEMT Win Semiconductors
- Porting: IP can be ported to 65nm Si / CMOS node
- Maturity: IC is fabricated and tested.
- Availability: Now

Functional Block Diagram:

Deliverables:

- Schematic and Netlist
- Abstract Model (.lib file)
- Layout View(Optional)
- Behavioral model (Circuit & EM simulation)
- Extracted View(Optional)
- GDSII
- DRC, LVS, Antenna report
- Test bench with configuration(Optional)
- Documentation
